myBaits Expert — Predesigned Panels

myBaits Expert Wheat Exome

[Home](#) • [Genomics](#) • [Targeted Sequencing](#) • [myBaits Hybrid Capture Kits](#) • [myBaits Expert — Predesigned Panels](#) • myBaits Expert Wheat Exome

Enrich for over 250 megabases of high-confidence exons from a wide variety of wheat cultivars.

The new myBaits[®] Expert Wheat Exome panel was developed in collaboration with the International Wheat Genome Sequencing Consortium (IWGSC) using the most up to date genome assembly and annotation set of Chinese Spring. The panel enriches for the complete high-confidence exon-annotated genome in hexaploid wheat, retrieving over 250 megabases of CDS and CDS-proximate regions of the greater than 15 GB *Triticum aestivum* genome.

Arbor Biosciences Partners with Curio Genomics for Analysis of IWGSC Wheat Exome

Ann Arbor, Michigan July 16, 2019 – Arbor Biosciences, a division of Chiral Technologies, Inc and worldwide leader in next generation sequencing (NGS) target enrichment, announces a partnership with Curio Genomics for bioinformatics analysis of the wheat genome. Arbor has an ongoing collaboration with the International Wheat Genome Sequencing Consortium (IWGSC), an international organization dedicated to developing a

W693 Alignment, Analysis, and Visualization of Wheat NGS Samples in Curio

2:50 @ Tuesday workshop

Details

Session: IWGSC – Wheat Genome Manual and Functional Annotation
Location: Pacific Salon 2
Date: Tuesday, Jan 14 2:50 PM
Duration: 20 minutes

Speakers

Presenting Author
Shawn Quinn
Curio Genomics

Tetraploids performance

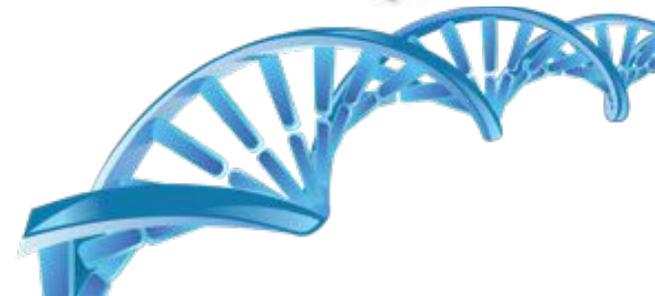

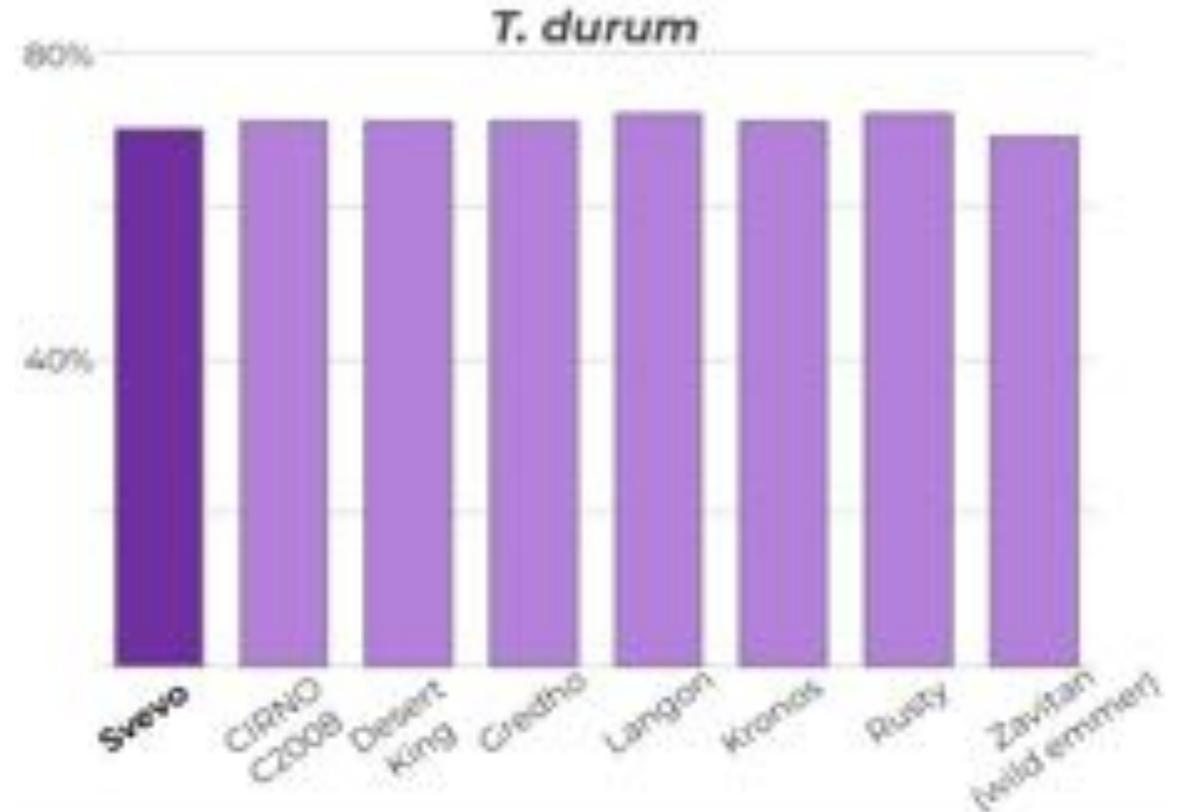

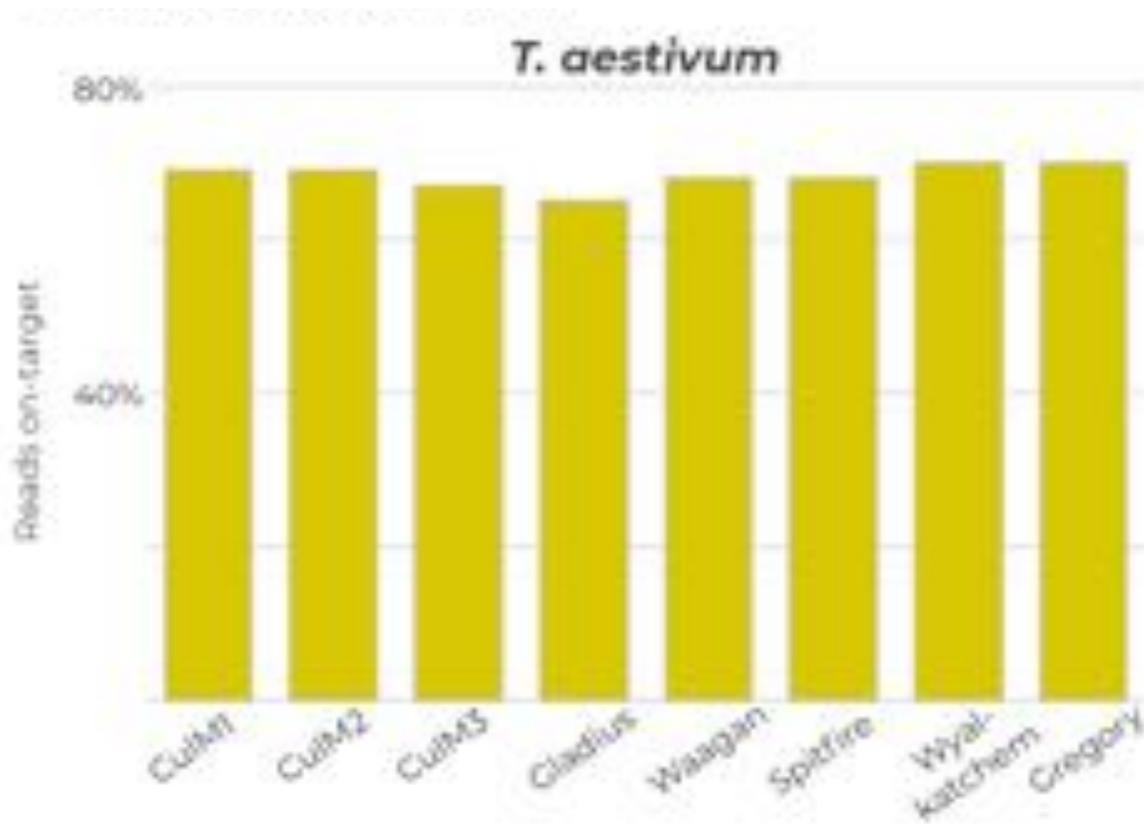

Thanks
Jorge!

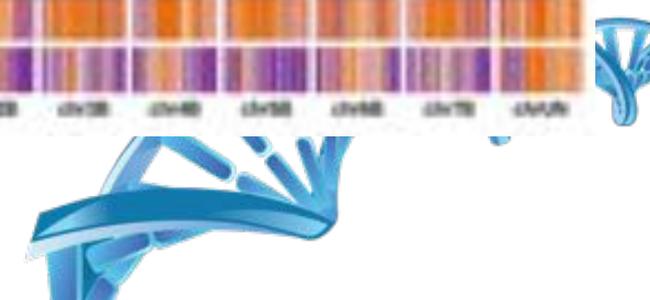

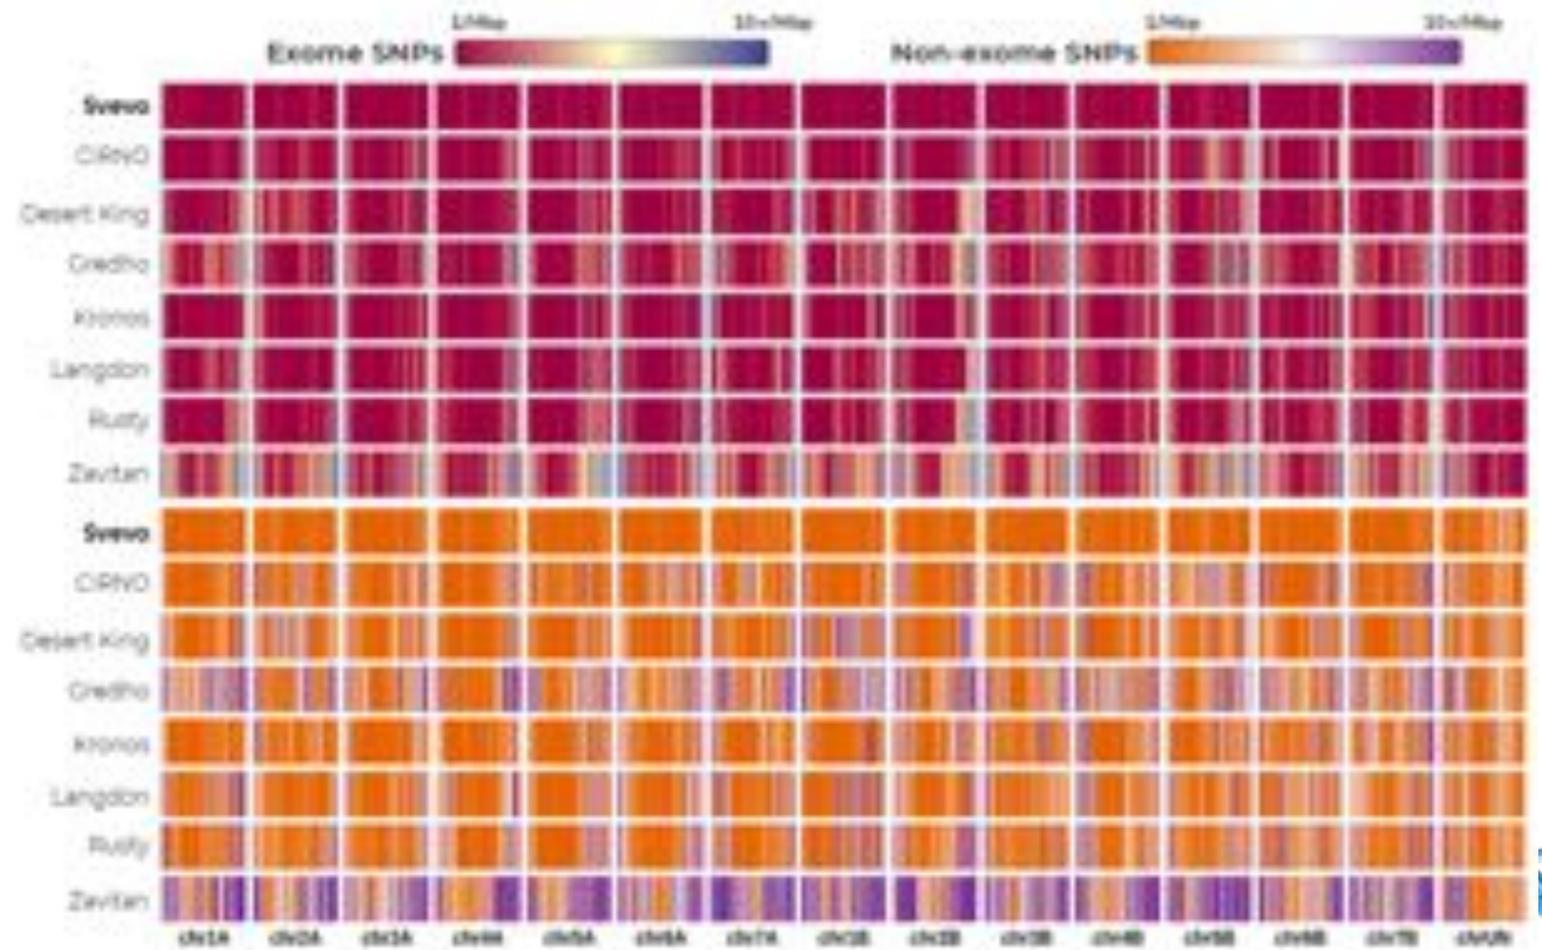

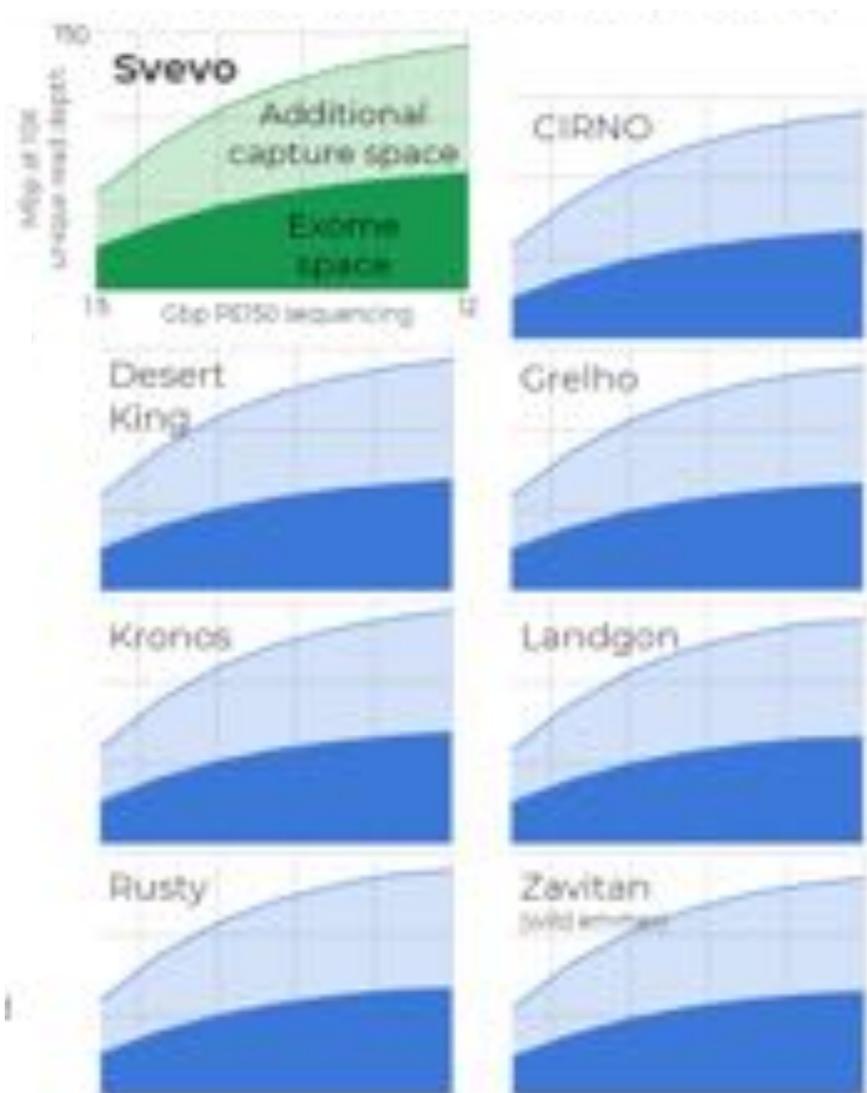

Kit performance with tetraploids

Mapping to Chinese Spring

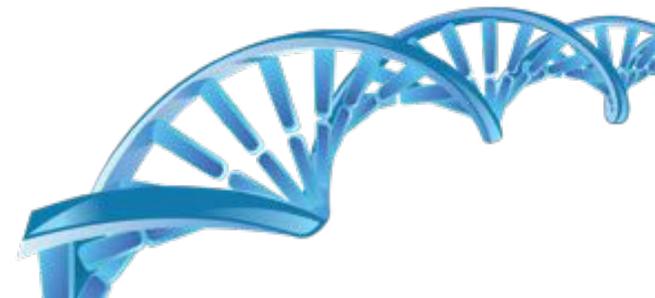

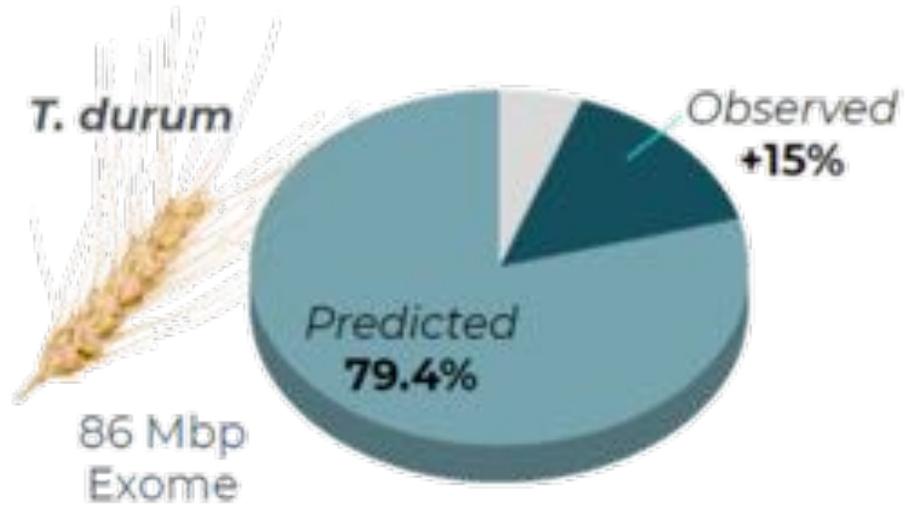

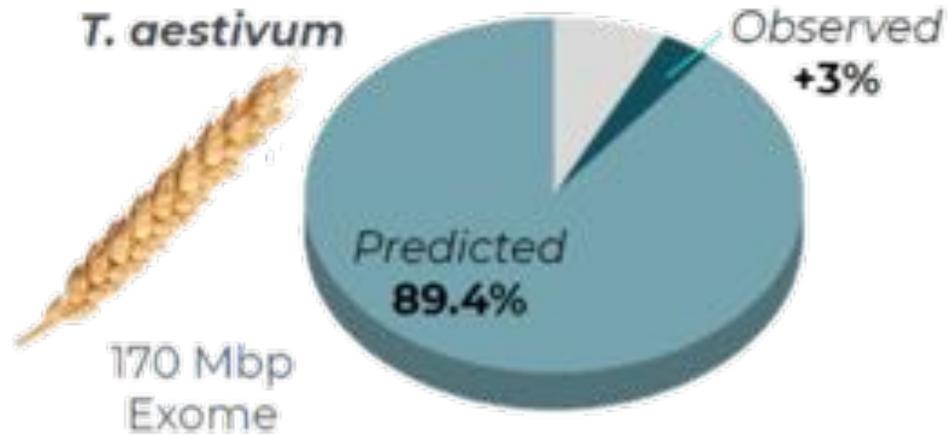

Kit performance with tetraploids

Mapping to Svevo - 57 to 61% on-target

Multi-taxon utility

Retrievable Exome Portion

Wheat Exome Kit v1

Promoters module

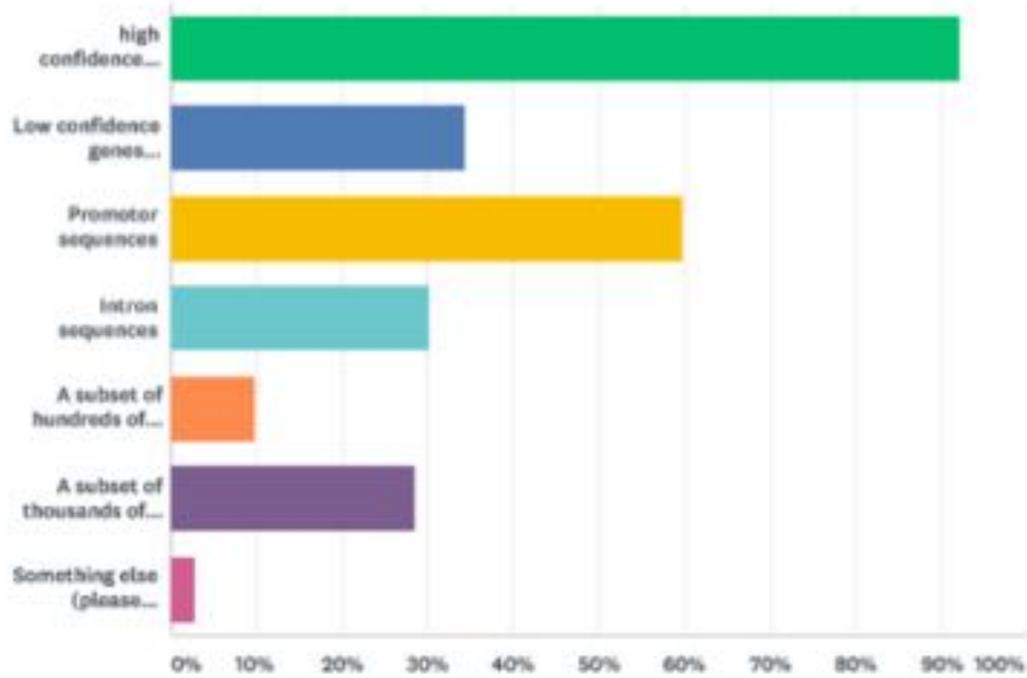

Promoter capture module next

Q2 What components of a wheat exome capture would be valuable for your work?

Answered: 102 Skipped: 3

Jorge Dubcovsky

Etienne Paux

Promoter capture composition

Development is accelerated

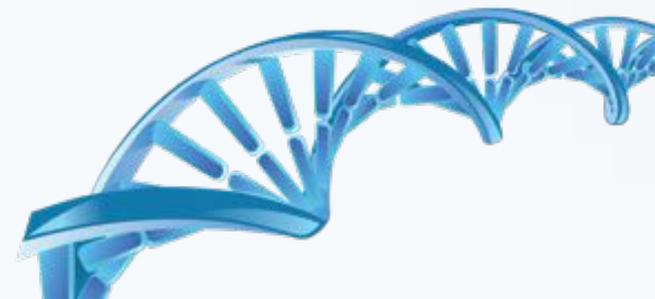

Putative promoter regions

- + Existing capture performance data
- + ATAC-seq-identified regions
- kmer-based repeat filtration

180 Mbp

Synthesis starts in February

Thanks!
